

Anatomy Academy

Summer Camp

Class Topics:

Nature Awareness

Play the nature scavenger hunt that combines science exploration with the animal kingdom! Campers learn about life cycles and animal habits, and design a t-shirt using natural dyes made from plants and berries. Discover how science will help us protect our planet and understand the basics of water pollution, acid rain, and the benefits of solar energy.

The Science of Sport

What do football players, scientists and ballet dancers have in common? Explore how Newton helps us learn why we move the way we do, and improve the games we play. Campers experiment with games and activities while learning how physical and chemical sciences affect their equipment, movement, and technique.

The Organ Trail

Explore your insides and learn how your heart is actually a pump, how your organs work as a team and make your own model lungs. Make a map of your body showing the organs and get a cool organ apron!

Cell City

Discover the inner workings of your body's building blocks: your cells! Find out how the organelles of your cells work together like a miniature city to keep things moving.

The Birds & the Beasts

Where do owls live and what do they eat? (Find out up close and personal as we dissect an owl pellet) How do some bugs walk on water? How do ants collect all their food? These questions and more will be answered with a walk on the wild side of things to explore owls, birds and all kinds of bugs.
