

Dynamic Discoveries

Bugs!

Explore insect defenses and their role in our ecosystems with fun, hands-on activities that introduce children to these fascinating creatures! Children will be all a-buzz when looking through their own Insect-a-Vision.

Detective Science

Watch as the classroom is transformed into a crime lab for this exciting exploration of the fundamentals of forensics. Children will even take home their very own Identification Kit.

It's so much fun that it's criminal!

Earthworks

Investigate the powerful processes that shape the planet and form magnificent minerals, glittering gems and titanic tectonics!

Children will take home sedimentary stacking Experi-tubes. This will, this will, rock you!

Movie Effects

Use the elementary tools of moviemaking and learn how special effects used in the past influenced the ones used today.

Get animated with animating your own animation with the Cartoon Creator

Science of Toys

Experience the physics of gyroscopes, gears and Jacob's ladder! Dare to defy the pull of gravity and even take home your very own Yo-yo. Children won't be *playing* with toys, they'll be experimenting with fun!

Walloping Weather

Discover how hurricanes, tornadoes, and thunderstorms develop, and how powerful they can be! Our junior meteorologists will be forecasting some fun using their Sun Beads.

Each Class will have a Mad Science Project for the participants to take home.
